Annual Bull & Heifer Sale
Tuesday February 6th 2018
Sale Starts at 1:00 PM at the Ranch
(Lunch will be served at 12 Noon)

Selling:
40 Yearling Bulls
11 Open Registered Heifers
and
1 Bred Heifer

www.babcockangus.com
Cattle Producers,

Thank you for your consideration of Babcock Angus bulls.

All of the bulls have been DNA tested, so their EPDs are reflective of the genomic results, which yields greater accuracy. This is a valuable data enhancement that allows you to select bulls with greater confidence.

We feel very strongly that this is an excellent set of bulls that are backed by an equally excellent set of cows. We strive for high maternal, moderate framed, docile females with great udder qualities.

We sincerely thank all the satisfied customers who have made our success and progress possible. We are doing everything possible for our customers to get immediate results from our genetics for faster return on your investment.

We hope to see you at the ranch on Tuesday, February 6th, sale starting at 1:00, lunch prior to the sale. If you have any questions, feel free to call any time.

Sincerely,

The Babcock's
Babcock Angus
Bull & Heifer Sale
Tuesday, February 6
at the Ranch
Sale Starts at 1:00 p.m.
Sale Day Phone
402-273-4522

Directions
Located at the Ranch. Go 1 mile North of Rose.
Turn West onto Rd 854 then go 10 miles West
and 1 mile South.
(Paramount Valley Rd, on top of the hill)

Or, 27 miles South of Bassett. Turn West onto
Rd 854 then go 10 miles West and 1 mile South.

From Ainsworth, go South on Hwy 7 for 20 miles,
turn East on Raven Rd. Go East 15 miles, then
1 mile South.

Storm Date
Thursday, February 8, 2018

View the Bulls
The bulls can be viewed anytime, at the ranch.

AuCtioneer
Lin Gumb - 308-346-4100

Cell Phone Service
Cell service is NOT available at the sale site,
so please plan accordingly.

Wi-Fi
Wi-Fi is available.

First Breeding Season Guarantee
All bulls will be insured at
Babcock Angus’ expense.
For any questions, please call us.

Delivery
Free delivery on all bulls or a $50 discount if you
take them on sale day.
Heifers need to be picked up as soon as possible.

www.babcockangus.com
Expected Progeny Difference (EPD), is the prediction of how future progeny of each animal are expected to perform relative to the progeny of other animals listed in the database. EPDs are expressed in units of measure for the trait, plus or minus. Interim EPDs may appear on young animals when their performance has yet to be incorporated into the American Angus Association National Cattle Evaluation (NCE) procedures. This EPD will be preceded by an “I”, and may or may not include the animal’s own performance record for a particular trait, depending on its availability, appropriate contemporary grouping, or data edits needed for NCE.

Accuracy (ACC), is the reliability that can be placed on the EPD. An accuracy of close to 1.0 indicates higher reliability. Accuracy is impacted by the number of progeny and ancestral records included in the analysis.

GROWTH
Calving Ease Direct (CED), is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire’s calves will be born when he is bred to first-calf heifers.

Birth Weight EPD (BW), expressed in pounds, is a predictor of a sire’s ability to transmit birth weight to his progeny compared to that of other sires.

Weaning Weight EPD (WW), expressed in pounds, is a predictor of a sire’s ability to transmit weaning growth to his progeny compared to that of other sires.

Residual Average Daily Gain (RADG), feed efficiency expressed in pounds per day, is a predictor of a sire’s genetic ability for postweaning gain in future progeny compared to that of other sires, given a constant amount of feed consumed.

Yearling Weight EPD (YW), expressed in pounds, is a predictor of a sire’s ability to transmit yearling growth to his progeny compared to that of other sires.

Yearling Height EPD (YH), is a predictor of a sire’s ability to transmit yearling height, expressed in inches, compared to the that of other sires.

Scrotal Circumference EPD (SC), expressed in centimeters, is a predictor of the difference in transmitting ability for scrotal size compared to that of other sires.

Docility (DOC), is expressed as a difference in yearling cattle temperament, with a higher value indicating more favorable docility. It predicts the average difference of progeny from a sire in comparison with another sire’s calves.

Maternal Milk EPD (Milk), is a predictor of a sire’s genetic merit for milk and mothering ability as expressed in his daughters compared to daughters of other sires. In other words, it is that part of a calf’s weaning weight attributed to milk and mothering ability.

Mature Weight EPD (MW), expressed in pounds, is a predictor of the difference in mature weight of daughters of a sire compared to the daughters of other sires.

Mature Height EPD (MH), expressed in inches, is a predictor of the difference in mature height of a sire’s daughters compared to daughters of other sires.

Cow Energy Value (SEN), expressed in dollars savings per cow per year, assesses differences in cow energy requirements as an expected dollar savings difference in daughters of sires. A larger value is more favorable when comparing two animals (more dollars saved on feed energy expenses). Components for computing the cow SEN savings difference include lactation energy requirements and energy costs associated with differences in mature cow size.

CARCASS

The genetic evaluation produces a single set of EPDs for carcass weight, marbling score, Ribeye area and fat thickness. The units of measure are in carcass trait format and analyzed on an age-constant basis.

Carcass Weight EPD (CW), expressed in pounds is a predictor of the differences in hot carcass weight of a sire’s progeny compared to progeny of other sires.

Marbling EPD (Marb), expressed as a fraction of the difference in USDA marbling score of a sire’s progeny compared to progeny of other sires.

Ribeye Area EPD (RE), expressed in square inches, is a predictor of the difference in ribeye area of a sire’s progeny compared to progeny of other sires.

Fat Thickness EPD (Fat), expressed in inches, is a predictor of the differences in external fat thickness at the 12th rib (as measured between the 12th and 13th ribs) of a sire’s progeny compared to progeny of other sires.

$VALUE INDEXES

$Values, are multi-trait selection indexes to assist beef producers by adding simplicity to genetic selection decisions. $Values are reported in dollars per head, where a higher value is more favorable. The $Value is an estimate of how future progeny of each sire are expected to perform, on average, compared to progeny of other sires in the database if the sires were randomly mated to cows and if calves were exposed to the same environment.

Weaned Calf Value ($W), an index value expressed in dollars per head, is the expected average difference in future progeny performance for postweaning merit compared to progeny of other sires.

Grid Value ($G), an index value expressed in dollars per head, is the expected average difference in future progeny performance for carcass grid merit compared to progeny of other sires.

Quality Grade ($QG) represents the quality grade segment of the economic advantage found in $G. $QG is intended for the specialized user wanting to place more emphasis on improving quality grade. The carcass marbling (Marb) EPD, which is influenced by carcass marbling scores and ultrasound percent intramuscular fat (% IMF) measurements, contribute to $QG.

Yield Grade ($YG) $YG represents the yield grade segment of the economic advantage found in $G. $YG is intended for the specialized user wanting to place more emphasis on red meat yield. It provides a multi-trait approach to encompass ribeye, fat thickness and weight into an economic value for red meat yield.

$G combines both $QG and $YG, and may be the best carcass decision tool for focusing on quality and red meat yield simultaneously.

Beef Value (SB), an index value expressed in dollars per head, is the expected average difference in future progeny performance for postweaning and carcass value compared to progeny of other sires.
Driving the science of better breeding

There’s little room for error in the cattle business. Producers need the most advanced information to make smart selection decisions, and Angus Genetics Inc. (AGI) provides it through genomic-enhanced expected progeny differences (GE-EPDs).

GE-EPDs have become the industry standard for herd improvement, building on decades of science-backed genetic evaluation tools originated and maintained through the American Angus Association®, home to the largest and ever-growing single-breed beef cattle database.

EPDs that traditionally contained all pedigree, performance and progeny information now also include results from available genomic, or DNA, tests. Breeders who use genomic technology give buyers access to AGI-generated GE-EPDs that provide:

- Increased predictability and decreased risk for young and unproven animals due to enhanced accuracy of EPDs
- Better characterization of genetics for difficult-to-measure performance traits (such as carcass traits, maternal traits and feed efficiency)
- The ability to make more rapid progress for traits that are important to you, due to:
  - more accurate selection
  - easier identification of genetic outliers
  - the ability to propagate young animals with confidence earlier in their lives

In fact, GE-EPDs on unproven animals have the same amount of accuracy as if they had recorded 8-33 calves, depending on the trait. That’s valuable insight, offered regularly through the breed’s weekly national cattle evaluation.

How do you know if EPDs are genomic-enhanced?

Ask your breeder, refer to the registration paper, or look for the AGI GE-EPD logo, Angus GS™ powered by partner Neogen GeneSeek or the HD50k or i50k by partner Zoetis. These images indicate animals for which low-density or high-density genomic testing has been conducted and incorporated by AGI into GE-EPDs.

www.angus.org
As you will see, throughout this catalog, there are a lot of Identity bulls. He is a son of Koupals B&B Identity—the high selling $56,000 bull. Our bull was as tame as they make them. He has generated a lot of really nice offspring. He was heavily used again this spring and he stayed in excellent condition. But, unfortunately, he passed last fall. But on the bright side, we purchased a bull by the name of Nikon 5035. He is a maternal brother to the Koupals B&B Identity bull.

Semen is available—please contact Babcock Angus.

Babcock Angus purchased this bull with Select Sires at Mohnen Angus 2017 bull sale. We are very excited to see what this bull will produce for us and many other breeders. He is a very good looking Recharge son.

**Semen is available—please contact Select Sires.**

Coverage: The coverage provides traditional, full mortality for death from natural causes or humane destruction as a result of a life-threatening injury. The endorsement for Accident, Sickness & Disease Infertility provides coverage in the event of permanent impotency, infertility or the bulls inability to naturally service cows as a result of an accident, sickness or disease sustained during the policy.

**OPTION 1**

Bull Mortality and Infertility Coverage

Values: Not to exceed purchase price

Term: Renewable 6 month or 1 year policy term for bulls 6 months to 7 years of age

Testing: All bulls must be tested, certified & listed in the official herd sale catalog.

Mortality Payout: 100% of the value of the bull in the event of death or humane destruction as a result of a life-threatening injury.

Accident, Sickness & Disease Infertility: (Winter Freeze & Frostbite Covered)
80% of the value of the bull, less salvage value, in the event of permanent impotency, infertility or being incapable of serving females as a result of an accident, illness or disease sustained during policy period.

• Testing- The animal must pass a BSE and Health exam unless bound the date of the auction.
• Special Rates apply for Stud Bulls that don’t breed live cattle.

**OPTION 2**

Bull Mortality and Infertility Coverage

Values: Not to exceed purchase price

Term: Renewable 6 month or 1 year policy term for bulls 6 months to 7 years of age

Testing: All bulls must be tested, certified & listed in the official herd sale catalog.

Mortality Payout: 100% of the value of the bull in the event of death or humane destruction as a result of a life-threatening injury.

Accident, Sickness & Disease Infertility: (Winter Freeze & Frostbite Covered)
100% of the value of the bull, less salvage value, in the event of permanent impotency, infertility or being incapable of serving females as a result of an accident, illness or disease sustained during policy period.

• Testing- The animal must pass a BSE and Health exam unless bound the date of the auction.
• Special Rates apply for Stud Bulls that don’t breed live cattle.

**OPTION 3**

Mortality Only Coverage: Mortality Payout: 100% of the value of the bull in the event of death or humane destruction as a result of a life-threatening injury. Volume rates may apply, please call for details.

• Veterinarian examination required on cattle $50,000 +, 7 years of age and older and show steers valued at $25,000 + unless bound the date of the auction.

Semen Suitability Endorsement: A new and exciting endorsement people have been talking about! This policy will pay in the event the bull becomes totally and permanently unable to produce semen that will freeze in liquid nitrogen. Once a bull freezes a straw of semen in liquid nitrogen, we can then insure the bull in case he quits freezing within the policy period to better eliminate the risk to you the insured.
